Cyber Security Training Online

Job-Oriented Certification & Hands-on Lab Program

TRACK / DISCIPLINE	TOTAL DURATION	DELIVERY MODE	CERTIFICATION
Cyber Security	16 Weeks (65h Live Interactive Labs)	Live Online & 24/7 Virtual Cloud Labs	Verified Credential

1. EXECUTIVE PROGRAM OVERVIEW

Our online Cyber security training and placement program is fully job-oriented and includes real-time project work for hands-on learning. The Cyber Security Training Online Certification Course is developed by certified experts to deliver industry-ready skills covering networking, Linux, vulnerability assessment, SIEM operations, and defensive security.

TOOLS & TECHNOLOGIES STACK:

WIRESHARK | NMAP | SNORT | SPLUNK | METASPLOIT | KALI LINUX | BURP SUITE | MITRE ATT&CK | OWASP ZAP

2. MODULAR SYLLABUS BREAKDOWN

MODULE 01 Networking Fundamentals & Protocol Analysis — 3 Weeks

- OSI Model & TCP/IP stack deep dive
- IP addressing, Subnetting, Routing and Switching
- TCP three-way handshake, UDP, DNS, DHCP, HTTP/S protocols
- Packet capture and packet analysis using Wireshark

Lab Milestone: Live Wireshark packet capture lab; network traffic triage and protocol decoding.

MODULE 02 Linux Command Line for Security Practitioners — 2 Weeks

- Linux directory structure, permissions, and user management
- Bash scripting, automation, grep, awk, and sed utilities
- Process management, cron jobs, network interfaces in Linux
- System logging (/var/log), firewall management (iptables, ufw)

Lab Milestone: Hardening Linux servers and automated bash reconnaissance scripts.

MODULE 03 Cyber Threat Landscape & Vulnerability Assessment — 3 Weeks

- Threat vectors: Malware, Ransomware, Phishing, Social Engineering
- Vulnerability identification and Common Vulnerabilities and Exposures (CVE)
- Network discovery and port scanning using Nmap and Zenmap
- Automated vulnerability scanning and security posture auditing

Lab Milestone: Complete corporate network scan and vulnerability discovery report.

MODULE 04 Web Application Security & OWASP Top 10 — 3 Weeks

- Web architecture: client-server, cookies, sessions, and APIs
- OWASP Top 10 vulnerabilities (SQLi, XSS, CSRF, IDOR, SSRF)
- Intercepting proxy configuration and testing using Burp Suite
- Responsible disclosure, remediation reporting, and defense in depth

Lab Milestone: Penetration testing on vulnerable web targets; finding and mitigating SQL injection and XSS.

MODULE 05 **Security Operations Center (SOC) & SIEM Monitoring** **3 Weeks**

- SOC roles, workflows, tier 1-3 escalation procedures
- Log aggregation and central monitoring using Splunk
- Writing search queries (SPL), creating dashboards, and correlation alerts
- Mitre ATT&CK framework mapping for real-world threat actors

Lab Milestone: Configured Splunk SIEM rules to detect simulated brute-force and credential stuffing attacks.

MODULE 06 **Incident Response, Reporting & Career Placement** **2 Weeks**

- NIST and SANS Incident Response lifecycle (Preparation to Lessons Learned)
- Artifact preservation, triage, containment, and eradication
- Writing professional security audit and executive compliance reports
- Resume building, LinkedIn optimization, and technical mock interviews

Lab Milestone: End-to-end incident handling simulation and portfolio capstone defense.

3. REAL-WORLD PORTFOLIO PROJECTS

Corporate Network Vulnerability Assessment

Conducted authorized discovery, port mapping, and vulnerability auditing across a simulated corporate intranet using Nmap, Nessus, and Wireshark.

Enterprise SOC Threat Monitoring with Splunk

Ingested server and firewall logs into Splunk Enterprise, developed detection rules for unauthorized access, and created an executive security posture dashboard.

AUTHORIZED INDUSTRY CERTIFICATION & CAREER SUPPORT

Graduates receive a verified credential shareable on LinkedIn, plus complete resume review, mock interviews, and corporate referrals.
